

## Digital Product Owner

Code Resourcing are recruiting on behalf of our client, a global leader within the logistics industry, for a Digital Product Owner. Our client is a digital frontrunner in their industry, and you will be a part of the digital and strategy transformation team. This is a key role within the organisation, where you are accountable for selecting and driving key innovative projects to enable the client to be the global leader in the industry.

### Your role

- As Product Owner, you will help translate business ideas and possibilities into tangible solutions, products and user experiences.
- The Product Owner role needs to combine business understanding with agile development processes to drive digital business development. Our development partner teams are small, flexible and employ agile methodologies to quickly provide the solutions we need.
- Your job will be to manage the backlog, incl. specifying requirements (user stories), and in general be responsible for both roadmap planning, scope management and sprint planning. You will be responsible for release management (prep. tech. release plans) and test planning, and you will work in close tandem directly with the CDO.

### Important personality traits

- Passion for agile and MVP approaches with an ability to bridge business and software development domains
- Ability to understand, prioritize and translate business needs into user stories and back-logs

### Skills required for the position

- SCRUM Master and Product Owner training (preferably certifications) and knowledge of agile development methods and process facilitation (ex. Google Five Day Sprint methodology)
- Proficient with drawing storyboards, creating wireframes, creating / 'grooming' product backlogs, writing user stories and developing acceptance criteria
- Prototyping, graphical mock-ups and simple prototyping (hands on ability)
- Customer engagement during rapid software development processes (Prototyping, Google Five Days Sprint, etc.)
- Ability to move between strategic discussions with senior leaders to tackle on the ground agile coaching with teams

- Knowledge and understanding of technical engineering best practices (e.g. test driven development, continuous integration, etc.)
- Clearly express the connections between larger business goals and small backlog items
- Write user stories in a way that allows the team to contribute to the “what”
- Modify the backlog in response to change (without having to throw out lots of work)
- Coordinate with scrum team friendly to make an ideal team for agile development. Improve the product quality
- Protect scrum team from any distraction and help them to stay focused and follow agreed-upon rules for scrum meetings
- Remove barriers between product owner and development team
- Has full authority for the entire process

### Experience needed

- Min. 3 years of experience from digital product owner roles and digital product management in general
- Experience as both a team member and coach in the agile product owner and/or scrum master roles.

### Benefits offered

A very competitive salary is offered, in addition to an annual bonus based on both personal and company performance. 30 days paid holiday, paid pension, medical insurance, generous maternity/paternity cover, and many more employee benefits. In addition to these benefits, then you will always have a performance development plan, where in collaboration with your manager, you develop skills and qualifications that will help you in your career aspirations.

### Application process

If you are interested in this position, please send your CV and short summary of your interest to Christian Payne, Recruitment Manager, email: [cp@coderesourcing.com](mailto:cp@coderesourcing.com). You will then be contacted for a follow up and dialogue to discuss the position in detail.
